Talking Rabbitt

Conversational AI Analytics · A Proposal for Zomato Leadership

Context

Zomato operates at a scale that very few companies in the world can match. Millions of orders, thousands of restaurant partners, and delivery networks spanning hundreds of cities — all generating enormous volumes of data every single day. That data holds the answers to some of your most important business questions: what's working, what isn't, and where to focus next.

The opportunity is enormous. So is the challenge.

The Challenge

Most leadership teams today are drowning in dashboards. There's a dashboard for revenue, one for logistics, one for customer satisfaction — and somehow, the answer to a simple question like "Why did orders drop in Pune this week?" still requires a data analyst, a few hours, and a slide deck.

- Too many dashboards, not enough clarity — each one tells part of the story, never the whole thing.
- Insights take time to surface — by the time a report lands, the moment to act has often passed.
- Leaders depend on analysts for answers — creating bottlenecks in teams that should be moving fast.
- Decision-making slows down — especially in fast-moving operational situations where speed matters most.

This isn't a data problem. Zomato has plenty of data. It's an access problem — and that's exactly what Talking Rabbitt is built to solve.

The Talking Rabbitt Solution

Talking Rabbitt sits as a conversational intelligence layer on top of Zomato's existing data infrastructure. Instead of navigating dashboards or waiting on reports, your leadership team simply asks a question — in plain English — and gets an answer instantly.

- ***"Which city generated the highest revenue today?"***
- ***"Why did order volume drop in Delhi this week?"***
- ***"Which restaurant category is growing fastest this quarter?"***
- ***"Which locations are experiencing delivery delays right now?"***

Each question returns three things immediately:

- A direct, plain-language answer — no interpretation needed.
- A chart or visualization — so the data speaks for itself.
- An AI-generated insight — surfacing patterns or anomalies your team might otherwise miss.

No SQL. No waiting. No middleman.

Business Impact

Here's what this looks like in practice for Zomato:

⚡ **Faster Decisions**	Leaders get answers in seconds, not hours — enabling real-time responses to operational changes.
□ **Empowered Leaders**	Non-technical executives can explore data independently, without relying on the analytics team for every question.
□ **Operational Agility**	Spot delivery issues, demand shifts, or restaurant performance changes the moment they happen — and act on them.
□ **Less Manual Work**	Reduce the volume of ad hoc report requests that consume analyst bandwidth, freeing them for higher-value work.

Our Vision for Zomato

Imagine a future where Zomato's leadership team doesn't open a dashboard to understand the business — they simply talk to it.

Talking Rabbitt is built to be that AI decision assistant — always on, always contextual, and fluent in the language of your business. As Zomato continues to grow across new cities, categories, and verticals, the complexity of your data will only increase. We want to make sure your leadership team never loses sight of what matters most.

The best decisions aren't made from reports. They're made from understanding — and that's what we're here to deliver.
