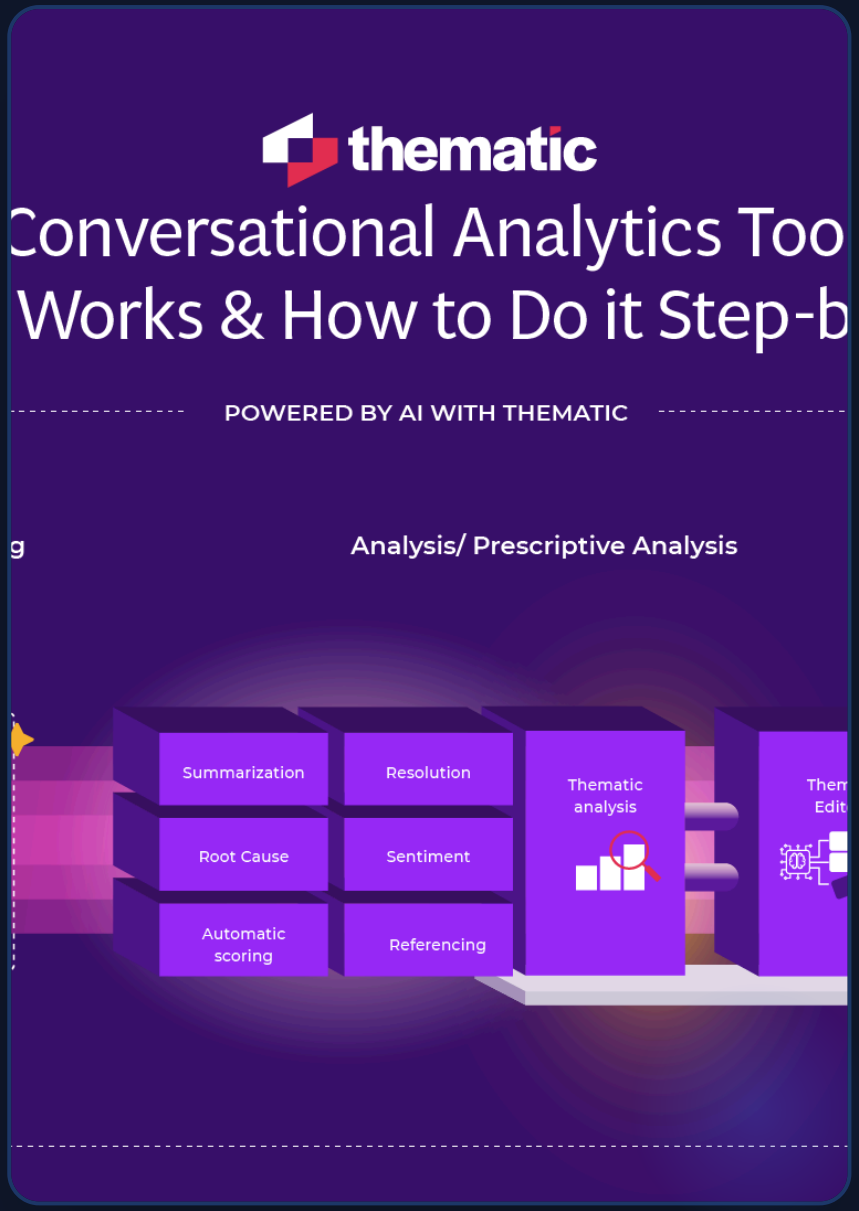
Talking Rabbitt

Conversational AI Layer for Enterprise Analytics

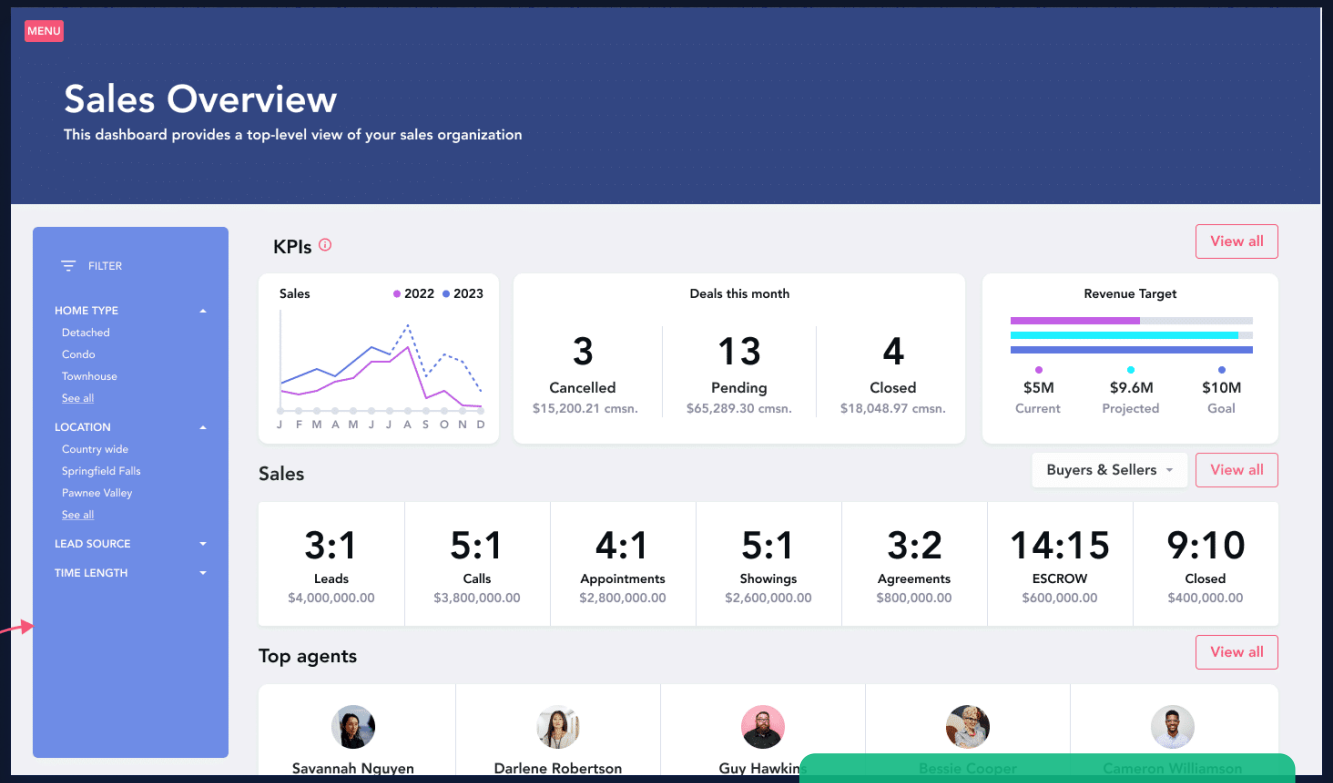
Turning business data into conversations



Business Intelligence is Broken for Decision Makers

- Leaders depend on dashboards and analysts for answers
- Current BI tools require technical skills (SQL, filters, dashboards)
- Getting simple insights takes minutes or hours
- Executives want answers instantly, not dashboards

Complex Dashboards



→ Simple Chat Needed

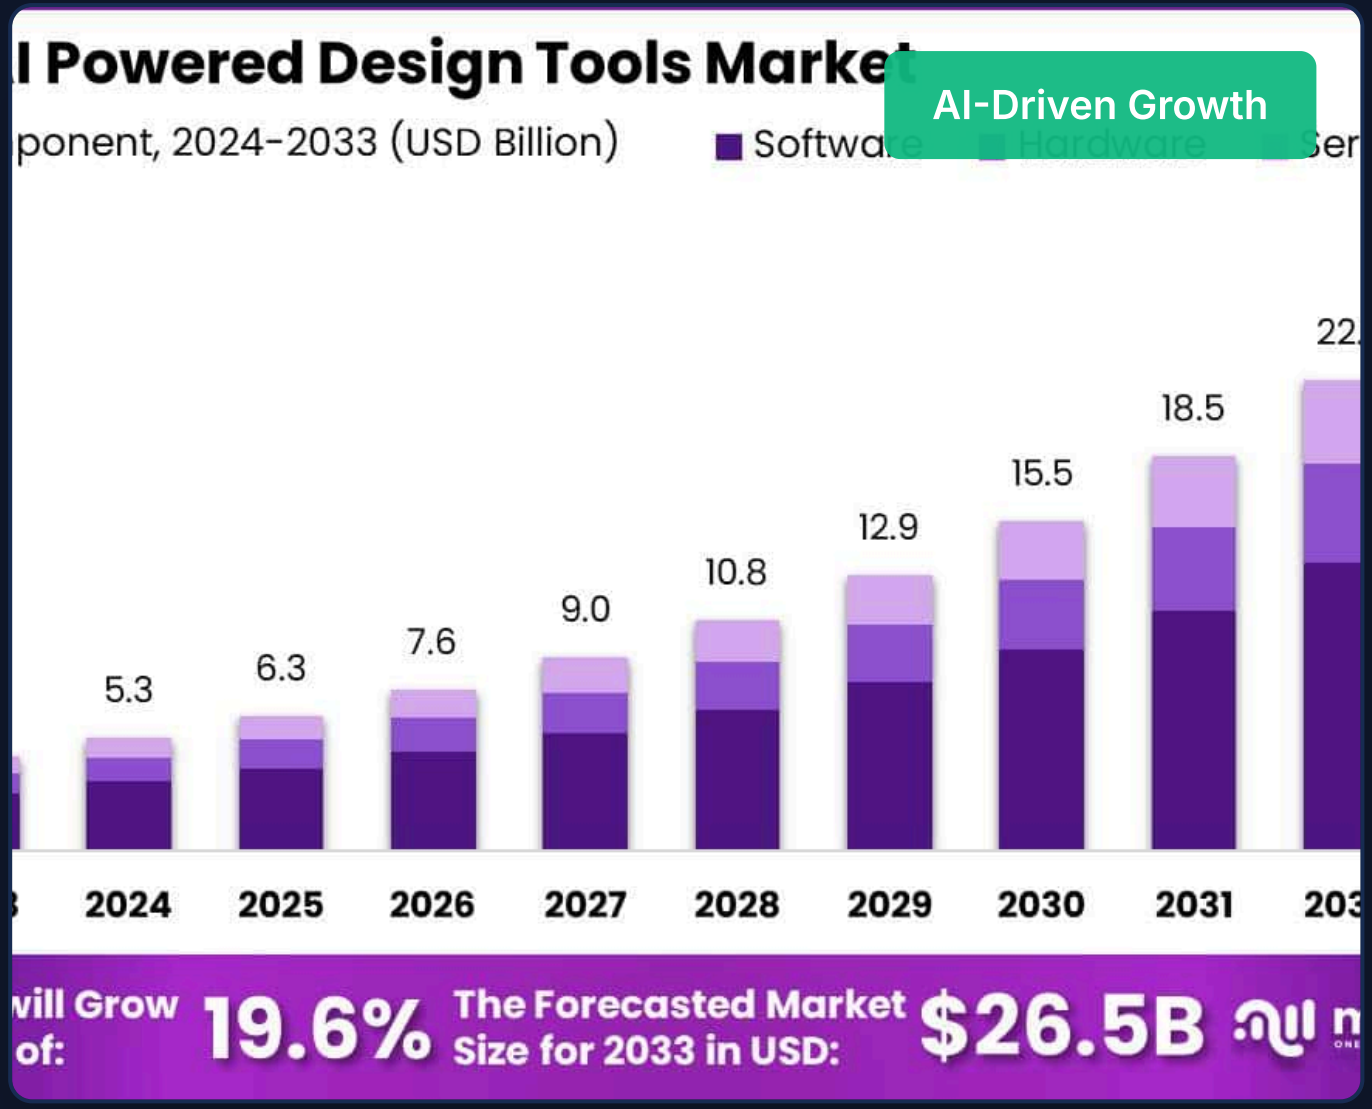
Filters are prioritized according to the contents of the page

The $30B+ Business Intelligence Market

- BI market growing rapidly with AI adoption
- Companies generating more data than ever
- Demand for faster decision intelligence

KEY PLAYERS

- Microsoft Power BI
- Tableau
- Looker



Competitive Landscape

Tool	Strength	Limitation
Power BI	Enterprise integrations	Requires dashboards
Tableau	Powerful visualizations	Steep learning curve
Looker	Data modeling	Requires technical setup
ThoughtSpot	Search analytics	Limited conversational AI

KEY INSIGHT

Most tools focus on dashboards rather than natural conversation.

From Dashboards to Conversations

Feature	Traditional BI	Talking Rabbitt
Interaction	Dashboards	Conversational AI
Speed	Minutes	Seconds
Users	Analysts	Anyone
Insights	Manual	AI-generated

KEY MESSAGE

Talking Rabbitt is a Conversational Decision Intelligence Platform.

What is Talking Rabbitt?

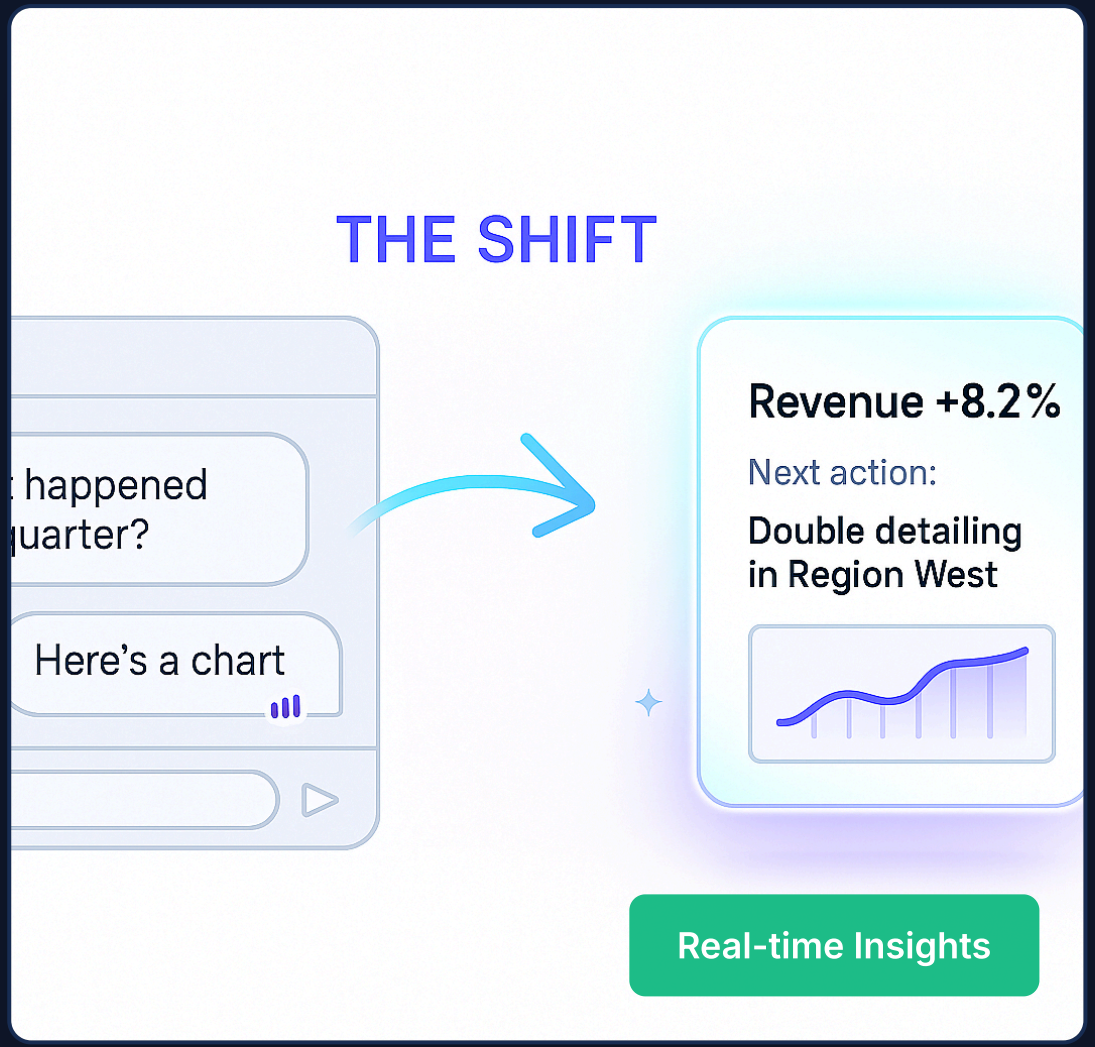
AI-powered conversational interface that sits on top of enterprise data and allows leaders to ask questions in natural language.

USER QUERY

"Which region generated the highest revenue in Q1?"

AI RESPONSE

"North America generated the highest revenue with $1.2M."



Ideal Customer Profile

PRIMARY TARGET

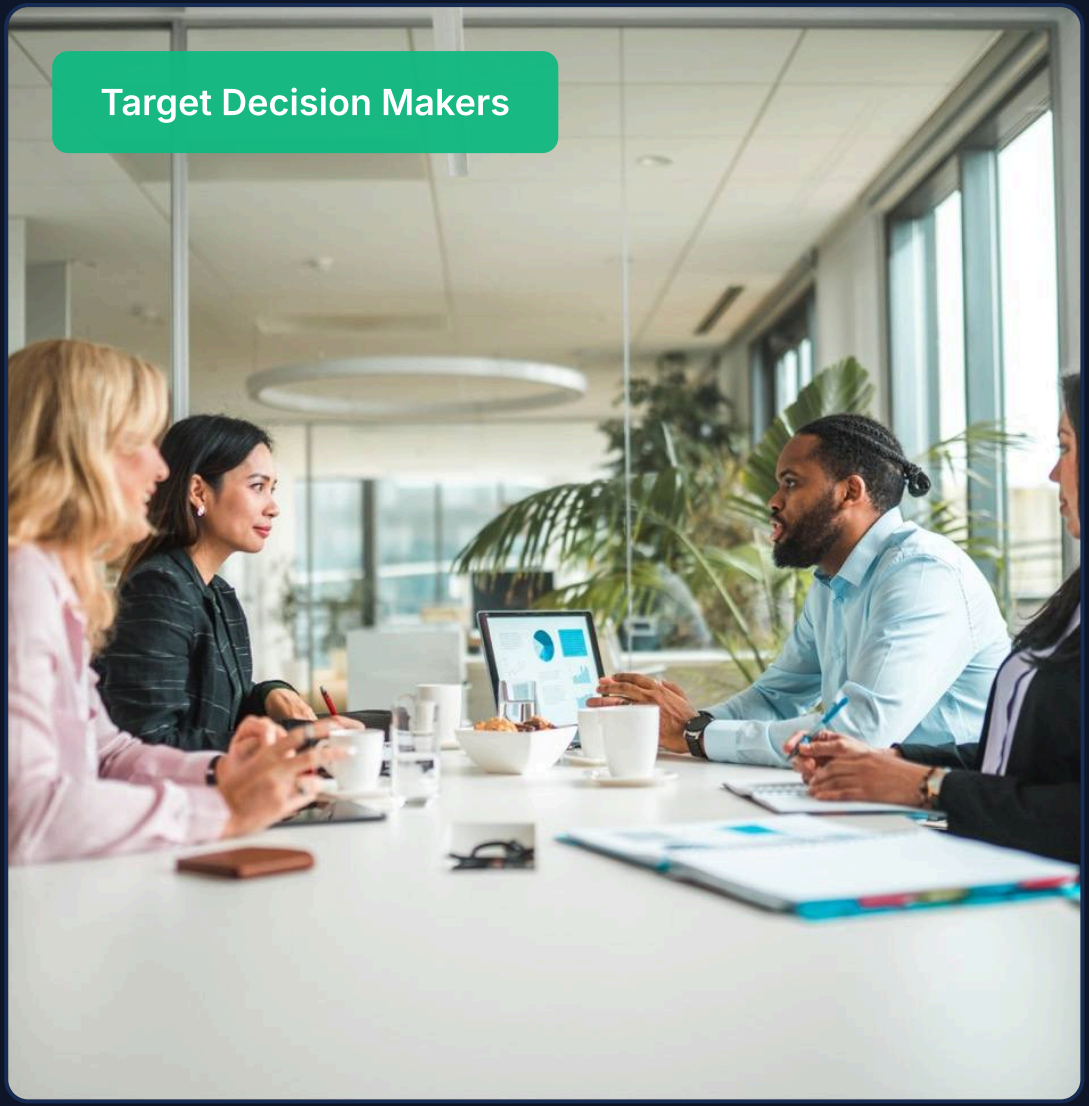
Mid-to-large SaaS companies

ATTRIBUTES

- 200–2000 employees
- High data usage
- Multiple dashboards in place
- Leadership needs quick insights

DECISION MAKERS

- Chief Revenue Officer
- VP Sales
- Product Leaders
- Founders



The Executive Decision Maker

PERSONA

Chief Revenue Officer

GOALS

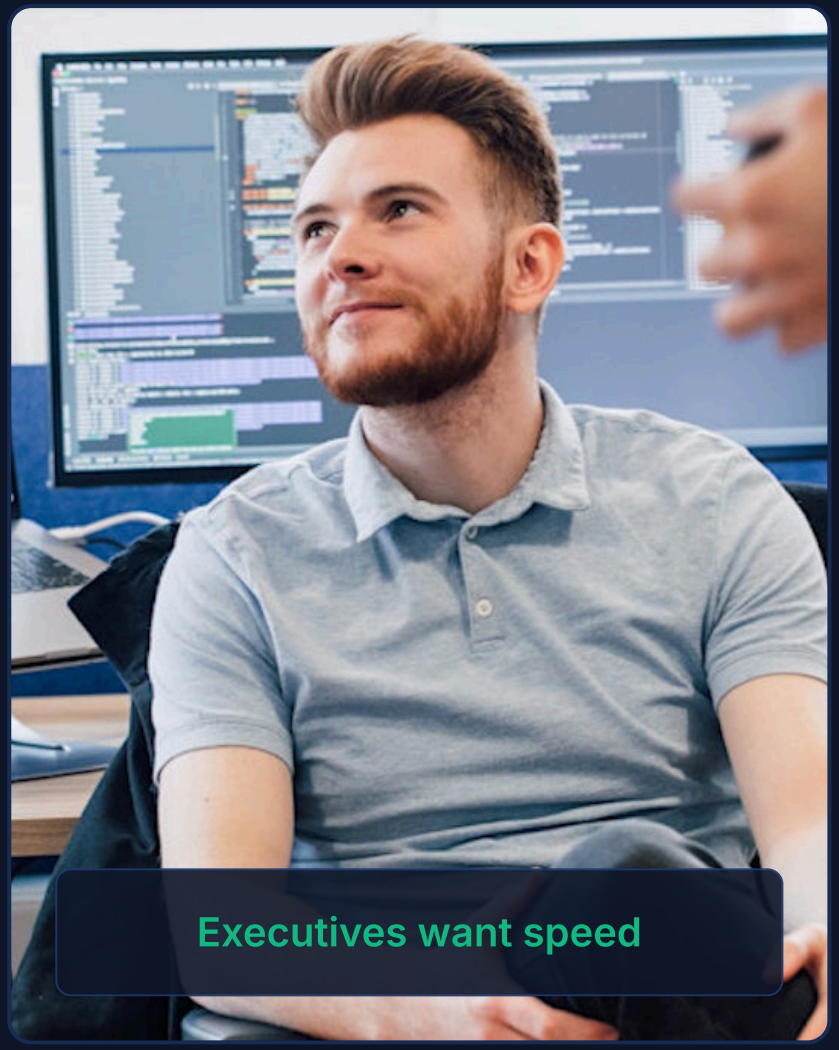
- Monitor revenue performance
- Track pipeline health
- Identify growth opportunities

PAIN POINTS

- Too many dashboards
- Delayed insights
- Dependence on analysts

DESIRED OUTCOME

Instant answers through conversation



Executives want speed

How Talking Rabbitt Wins

AI-First Product

Built for natural language queries from day one

Executive-Friendly UX

No dashboards required

Faster Insights

5-second answers vs 10-minute dashboard analysis

Automated Visualizations

Charts generated instantly from queries

STRATEGIC MESSAGE

Talking Rabbitt replaces dashboard complexity with conversational simplicity.

High-Impact Product Features

1

Conversational Query Engine

Users ask natural language questions about data

2

Automated Insight Detection

AI highlights anomalies and trends automatically

3

Voice-Based Data Interaction

Executives speak to their data using voice commands

The "Magic Moment"

MVP CONCEPT

User uploads a sales CSV file and asks questions in natural language

WORKFLOW

1. Upload dataset
2. Ask question
3. AI generates answer
4. Chart appears

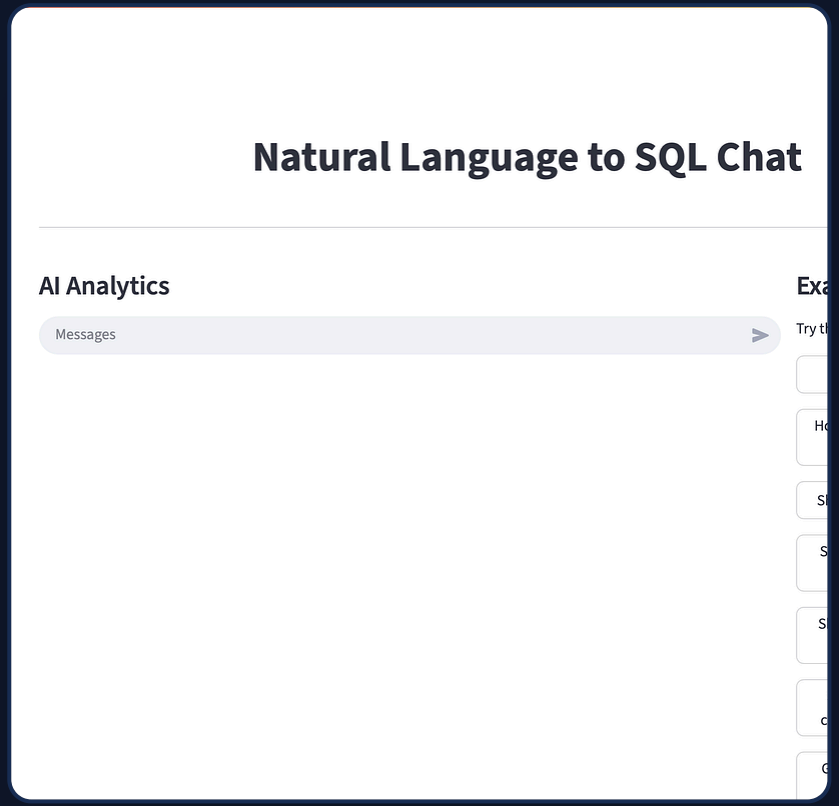
EXAMPLE

Query: "Which region had the highest revenue in Q1?"

Output: Text answer + bar chart

KEY INSIGHT

This proves conversational analytics can replace manual Excel analysis



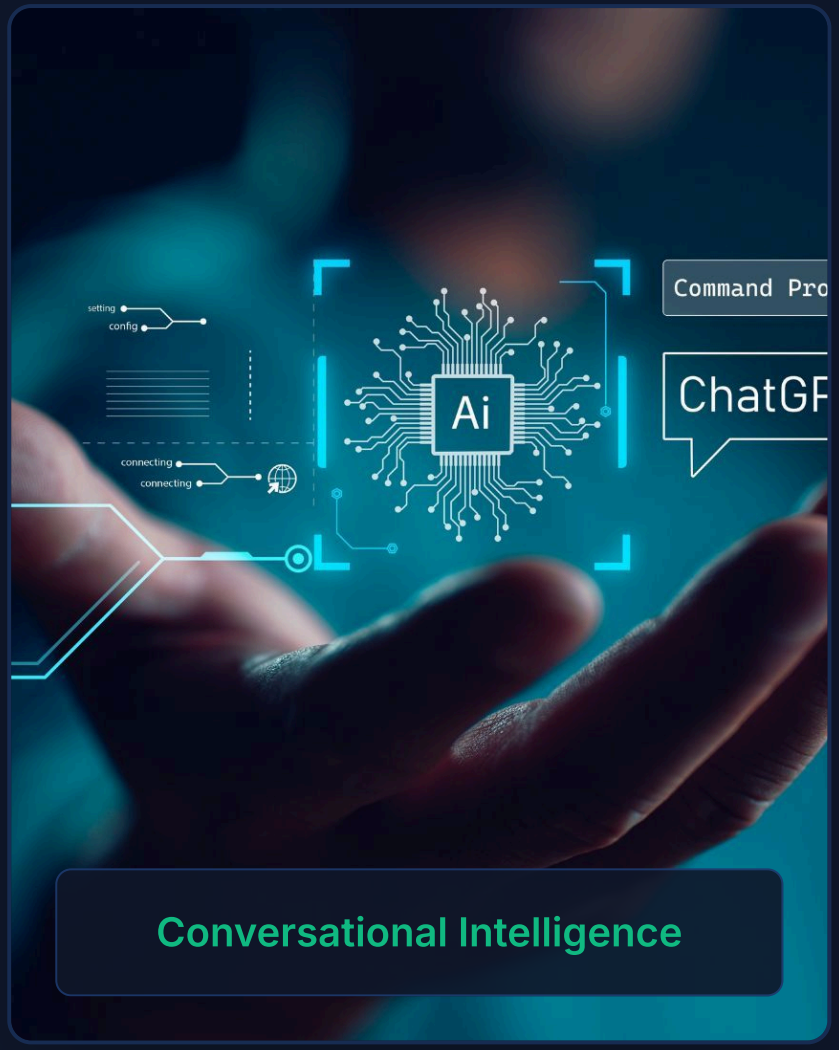
The Future of Business Intelligence

VISION

Talking Rabbitt becomes the conversational intelligence layer across enterprise data systems.

FUTURE CAPABILITIES

- Integrations with CRM, ERP, and cloud warehouses
- Predictive insights powered by AI
- Voice-based executive assistants for business data



Conversational Intelligence

The future of analytics is not dashboards.
It's conversations with your data.
